EDUCATIONAL OBJECTIVES

At the end of this course, participants should have gained knowledge of:

- How OCT angiography is used to detect choroidal neovascularization and evaluate response to anti-VEGF treatment.
- How OCT angiography is used to evaluate retinal capillary dropout in diabetic retinopathy and other retinal vascular diseases.
- How OCT angiography is used to evaluate reduction of macular and peripapillary vessel density in glaucoma.
- Reimbursement and compliance regulatory changes and how to apply changes to practices that will positively impact compliance and reimbursement.
- The impact of diet and nutrition on ophthalmic disease, eye health, and ocular development.
- Common causes of amblyopia and important aspects of patient history to obtain in evaluation of a patient with amblyopia.
- Differentiating between effluent and affuent pupillary defects, and conditions that lead to abnormal pupil exams.
- Main macular injections used in retina clinics and newer treatment options on the horizon for AMD/PDR.
- Recognizing patient needs regarding acute and chronic forms of glaucoma, understanding different forms of the disease and anticipating possible treatments.
- Differential diagnosis for common red eye complaints, and red flags and symptoms.
- Describe the basic anatomy and biochemical structure of the cornea.
- List the indications and contraindications for corneal cross-linking.
- Compare outcomes from collagen cross-linking to alternative procedures.
- Identify vision critical evaluation and provide further work up or referral including neuro-opthalmologic, carveal, retinal, and glaucomatous disease processes.
- The difference between OCB and immersion biometry. Four common IOL formulas used today and their differences.
- The most common options for IOL calculations in the post refractive surgery cataract patient.
- The supports and services offered by Guide Dogs for the Blind and how an individual who is blind or visually impaired qualifies for a guide dog.
- How a guide dog can be a positive solution to independent mobility without eyesight and can be a national resource to individuals who are blind or have low vision.
- Recognizing patients with intracranial hypertension and collecting appropriate history and recognizing ophthalmic signs and symptoms.
- How to treat common complaints such as dry and eye.
- How to triage calls to ensure emergent conditions receive appropriate management.

2017 FACULTY

- Brock Alonzo, MD
  2nd Year Ophthalmology Resident
  Casey Eye Institute
- Denice Barsness, CRA, COMT, ROUB, CDOS
  Consultant
  Genentech/OCT, DARC/Slit Lamp Reader
- David Huang, MD
  Ophthalmologist
  Casey Eye Institute/OHSU
- Elizabeth Cottle, CPC, OCS
  Associate Administrator
  Casey Eye Institute/DHSU
- Matt Duggan, MD
  1st Year Ophthalmology Resident
  Casey Eye Institute
- Kishan Gupta, MD
  1st Year Ophthalmology Resident
  Casey Eye Institute
- Brad Henriksen, MD
  1st Year Ophthalmology Resident
  Casey Eye Institute
- Jake Koch
  Outreach Alumni Representative
  Guide Dogs for the Blind
- Brigid Marshall, MD
  2nd Year Ophthalmology Resident
  Casey Eye Institute
- Travis Redd, MD
  1st Year Ophthalmology Resident
  Casey Eye Institute
- Meryl Sundy, MD
  2nd Year Ophthalmology Resident
  Casey Eye Institute
- Emanuel Tanne, MD
  Founder
  Intracranial Research Foundation
- Carin Waslo, MD
  Research Coordinator
  Intracranial Research Foundation
- Jonathan Young, MD
  2nd Year Ophthalmology Resident
  Casey Eye Institute

Instructor: Denice Barsness, CRA, COMT, ROUB, CDOS
Title: “Around the Globe With OCT”
Saturday, March 11, 2017
8:00 AM – 5:15 PM
World Forestry Center, David Douglas Room

**EDUCATIONAL OBJECTIVES**

At the end of this course, participants should have gained knowledge of:

- How OCT angiography is used to detect choroidal neovascularization and evaluate response to anti-VEGF treatment.
- How OCT angiography is used to evaluate retinal capillary dropout in diabetic retinopathy and other retinal vascular diseases.
- How OCT angiography is used to evaluate reduction of macular and peripapillary vessel density in glaucoma.
- Reimbursement and compliance regulatory changes and how to apply changes to practices that will positively impact compliance and reimbursement.
- The impact of diet and nutrition on ophthalmic disease, eye health, and ocular development.
- Common causes of amblyopia and important aspects of patient history to obtain in evaluation of a patient with amblyopia.
- Differentiating between effluent and afferent pupillary defects, and conditions that lead to abnormal pupil exams.
- Main ocular injections used in retina clinics and newer treatment options on the horizon for AMD/PDR.
- Recognizing patient needs regarding acute and chronic forms of glaucoma, understanding different forms of the disease and anticipating possible treatments.
- Differential diagnosis for common red eye complaints, and red flags and symptoms.
- Describe the basic anatomy and biochemical structure of the cornea.
- List the indications and contraindications for corneal cross-linking.
- Compare outcomes from collagen cross-linking to alternative procedures.
- Identify vision critical evaluation and provide further work up or referral including neuro-ophthalmologic, carveal, retinal, and glaucomatous disease processes.
- The difference between OCB and immersion biomicroscopy. Four common IOL formulas used today and their differences.
- The most common options for IOL calculations in the post refractive surgery cataract patient.
- The supports and services offered by Guide Dogs for the Blind and how an individual who is blind or visually impaired qualifies for a guide dog.
- How a guide dog can be a positive solution to independent mobility without eyesight and can be a national resource to individuals who are blind or have low vision.
- Recognizing patients with intracranial hypertension and collecting appropriate history and recognizing ophthalmic signs and symptoms.
- How to treat common complaints such as EKC and dry eye.
- How to triage calls to ensure emergent conditions receive appropriate management.

**INFORMATION**

This program is designed for ophthalmic medical personnel, including assistants, technicians, technologists and registered nurses. Education methods employed will include lecture, demonstration and audio/visual aids.

**JCAHPO ACCREDITATION**

The Joint Commission on Allied Health Personnel in Ophthalmology has awarded Continuing Education Credit (CEC) as follows: Group A: 7.75 (Maximum JCAHPO CEC allowed per attendee: 7.75)

**FINANCIAL DISCLOSURES**

JCAHPO has determined that financial interest shall be disclosed in courses sponsored or co-sponsored by JCAHPO or approved for continuing education credit by JCAHPO. The following speakers have declared interest currently or within the past 12 months in a Designated Company, or a financial relationship or advisory capacity with a Designated Company related to their presentation:

- David Huang, MD
  - Grants/Research: National Institutes of Health, Optovue, Inc.

- Denice Barness, CRA, COMT, ROUB, CDOS
  - Consultant: Genentech/OCT, DARC/Silk Lamp Reader
  - All other faculty has indicated no financial interest or financial relationship with a Designated Company related to their presentation.

**DISCLAIMER**

This course is not sponsored by JCAHPO, only reviewed for compliance with JCAHPO standards and criteria, and awarded continuing education credit accordingly; therefore, JCAHPO cannot predict the effectiveness of the program or assure its quality in substance and presentation.

**2017 FACULTY**

- Brock Alonzo, MD
  - 2nd Year Ophthalmology Resident
  - Casey Eye Institute

- Denice Barness, CRA, COMT, ROUB, CDOS
  - Technical Director
  - California Pacific Medical Center

- Timothy Boyce, MD
  - 1st Year Ophthalmology Resident
  - Casey Eye Institute

- Elizabeth Cottle, CPC, OCS
  - Associate Administrator
  - Casey Eye Institute/DHSU

- Matt Duggan, MD
  - 1st Year Ophthalmology Resident
  - Casey Eye Institute

- Kishan Gupta, MD
  - 1st Year Ophthalmology Resident
